$110m · Series C

Veir

Cryogenically cooled superconducting cable power distribution systems for data center campuses, based in Woburn, Massachusetts

Veir has demonstrated an operational 3-megawatt system. Total raised since inception reaches $225 million. The round was oversubscribed.

Purpose : Expansion of manufacturing capabilities, product portfolio development, and initial commercial projects

Perspective

Veir does not solve a grid-level power problem but an internal data center distribution bottleneck: the denser the chips, the more this last mile becomes the choke point, making demand mechanical as computing density continues to increase.

Announcement source: https://theaiinsider.tech/2026/10/08/veir-raises-110m-in-series-c-funding-to-scale-superconducting-power-systems-for-ai-data-centers/

$60m · Series B

Mecka

Mecka exceeded $100 million in annualized revenue in June 2026 and projects $300 million by year-end. It works with Georgia Tech, Stanford, MIT, ETH Zürich, UC San Diego, and Meta on the EgoVerse program. It is expanding its business into integration, post-training, and continuous robot deployment.

Perspective

The simultaneous presence of Nvidia, Microsoft, and Qualcomm as investors is not a generic validation signal: they are hardware and computing providers securing privileged access to the data layer on which their own market depends.

Announcement source: https://theaiinsider.tech/2026/10/08/mecka-raises-60m-in-series-b-funding-to-build-data-and-deployment-infrastructure-for-robots/

$50m · Series A

Gallatin AI

Gallatin AI's tools are already deployed with US Army units in several countries. The company announced an agreement with the III Armored Corps based at Fort Hood. Total equity raised since inception reaches $70 million.

Investors : 8VC and Silent Ventures (co-leads)

Perspective

Military logistics is one of the last major information systems not to have experienced a digital disruption comparable to what has occurred in commercial supply chains over the past twenty years, which favors players already referenced in a captive market with long-term contracts.

€7.13m · Seed

Klarent

Autonomous software testing platform for web, iOS, and Android applications generating deterministic test code via a multi-agent system, founded in Zurich

Founded in 2023 by Asheem Panakkat and Momchil Ivanov, former Google engineers. Already has European clients - JD Sports, NZZ, Sixt - and targets banks and insurers as the next vertical.

Purpose : Entry into the US market, strengthening of the engineering team, expansion of web and mobile test coverage

Investors : Mosaic Ventures, London (lead); Moonfire Ventures, AngelInvest Ventures; Jürgen Galler (ex-Google), Harris Barton

Perspective

Everyone invests in AI code generation; almost no one seriously funds the verification of this code - yet in the financial and insurance sectors, a faulty deployment is a regulatory event, not a bug to be fixed urgently.

€2.8m · Seed

TODAY

AI platform for financial and insurance advisors: meeting transcription, administrative tasks, sales coaching, and call management

Founded in 2024, based between Copenhagen and Berlin. Claims over 3,500 active advisors with insurers, distributors, and brokers in the DACH region. Founders from CLARK, Funding Circle, and Billie.

Purpose : Expansion in Germany, Austria, and Switzerland; development of front and back-office coverage for advisors

Investors : High-Tech Gründerfonds (HTGF) and Insurtech Gateway (co-leads); SeedX, Lucid Capital; Herbert Rogenhofer (former CEO HDI), Pierre Dubosq (founder Tech11)

Perspective

European financial services regulations and pension reforms are creating an increasing administrative burden for advisors, precisely when firms are looking to serve more clients without increasing their headcount.

€1.2m

C-Clerc

CRM software suite, websites, social networks, and communication for French notarial offices, compliant with notarial ethical constraints and GDPR

Founded in 2023, claims nearly 2 million euros in annual recurring revenue and over 25 employees.

Purpose : Accelerate growth and development of customer relationship solutions

Investors : ADNEXUS, fund of Groupe ADSN, historical operator of information systems for French notaries

Perspective

Raising funds from the operator of the digital infrastructure in which its clients work daily amounts to securing a distribution channel that most legaltechs struggle to build from the outside.
